Quest™

NetVault Backup for Exchange

Flexible, reliable protection for business-critical data stored in Microsoft Exchange

Experience flexible and reliable protection of your business-critical communications — and discover newfound flexibility in recovering your Exchange data — with NetVault Backup. This enterprise-grade backup and recovery solution makes it easy to recover crucial data in Microsoft Exchange, the world's leading corporate messaging software — even if you aren't an expert on Exchange internals.

Through an intuitive and easy-to-use user interface and automated workflow, NetVault Backup offers you a centralized console to set up, configure and define backup and restore policies for all your Exchange Servers. You can restore complete information stores, individual storage groups or individual databases. With support for Exchange Server high availability environments — such as single copy clusters (SCC), cluster continuous replication (CCR), local continuous replication (LCR) and database availability groups (DAG) — NetVault Backup allows you to maximize performance by backing up passive nodes and/or storage groups.

KEY BENEFITS:

Maximize IT staff efficiency — With NetVault Backup, you are free to focus on more critical tasks rather than repetitive and manual backup operations. Routine administrative options can be performed by less experienced personnel, empowering you to create comprehensive backup policies without the need to understand Exchange internals. NetVault Backup uses an automated workflow and complete point-and-click options for tasks such as job scheduling and restores.

BENEFITS:

- Online ESE or VSS backup methods
- Support for SCC, CCR, LCR and DAG environments
- Full, incremental and differential backups
- Copy-only backups
- Parallel stream support
- Protection down to the individual database level
- Point-and-click user interface
- Job scheduling
- Restore complete information stores, individual storage groups or individual databases
- Rename storage groups during restore
- Restore to recovery storage groups
- Restore to alternate Exchange Servers
- Combine with Recovery Manager for Exchange for granular recovery

Experience flexible and reliable protection for business-critical communications and the flexibility to recover your Exchange data with NetVault Backup — even if you aren't an expert on Exchange internals.

Ensure enterprise-class business continuity — With off-site backups being essential for disaster recovery, NetVault Backup supports a wide range of backup storage devices, including tape libraries, stand-alone tape devices, virtual tape libraries (VTLs) and shared VTLs. NetVault Backup offers the flexibility to select which backup storage device to store the backup on. You can store the backup online in a VTL and duplicate the job to physical tape libraries shared by multiple Exchange Servers or proprietary databases, or those used for general backup purposes.

Discover, compare and export Microsoft Exchange messages — NetVault Backup integrates with Recovery Manager for Exchange, allowing you to quickly and easily search and recover individual mail items. You can find and retrieve message-level data in minutes. You can use intelligent search based on sender, recipient, date, attachment type, subject, message keyword or attachment keyword and compare the contents of an online mailbox with a backup mailbox to identify any differences.

ABOUT QUEST

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple-to-use, and they deliver unmatched efficiency and productivity. Combined with Quest's invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
