

NetVault Backup for MySQL

Comprehensive protection for MySQL and your enterprise

It's significantly easier to back up and recover MySQL data — the world's most popular open-source database — when you have the right tools. Not to worry. Quest NetVault Backup has you covered.

NetVault Backup helps ensure continuity for MySQL mission-critical applications while providing a reliable disaster recovery solution. It's easy to use, yet will scale to meet the needs of even the most complex environments. Through an intuitive user interface, NetVault Backup consolidates the backup and recovery of multiple MySQL storage engines or instances into a single job without complex scripting.

NetVault Backup performs full, incremental or differential MySQL backups while your data is online and accessible. Its point-in-time functionality enables you to perform more granular restores; you can restore to a precise point, significantly reducing the amount of data loss.

KEY BENEFITS

Recover from data corruption rapidly

NetVault Backup gives you the tools you need to simplify the backup and recovery of business-critical MySQL databases. You can easily create a comprehensive and flexible backup policy without a deep understanding of MySQL database internals. NetVault Backup's point-and-click automated options reduce the need for manual intervention and the possibility of syntax errors.

Experience superb scalability and performance

NetVault Backup supports mysqldump and MySQL Enterprise Backup (MEB), giving you protection that scales from small databases and tables to very large databases. In fact, using NetVault Backup with MEB can significantly improve backup/restore performance and reduce your backup storage footprint.

BENEFITS:

- Reduce risks protecting and deploying MySQL
- Use the right method to back up and recover your MySQL data with support for mysqldump and MySQL Enterprise Backup
- Minimize downtime and increase business continuity
- Lessen total cost of ownership
- Maximize IT staff efficiency
- Rename databases during restore
- Restore to alternate instances

Ensure continuity for MySQL mission-critical applications — and get a reliable disaster recovery solution — with NetVault Backup. It's easy to use, yet scales easily to meet the needs of even the most complex environments.

SYSTEM REQUIREMENTS

MYSQL VERSIONS

MySQL 5.0, 5.1, 5.5 and 5.7

MYSQL PLATFORMS

Linux (32/64)

FreeBSD (32/64)

Windows (32/64)

Solaris (32/64)

Mac OS X

MYSQL STORAGE ENGINES

MyISAM

InnoDB

Memory/Heap

Merge

Federated

Archive

CSV

Berkeley DB

Minimize downtime and increase business continuity

In addition to full, incremental, differential and point-in-time restores, NetVault Backup restores individual tables, databases or entire instances of MySQL, which can further minimize downtime. You can also rename databases and restore them to a different MySQL instance or server — located either on premises or at your disaster recovery site.

Maximize IT staff efficiency

NetVault Backup's ability to manage distributed storage resources across multiple databases enables you to focus on critical projects, instead of repetitive and tedious manual backup and restore tasks. As your organization grows, even the most complex database storage systems can be protected with less DBA involvement.

Centralize management and automation

Using NetVault Backup's easy-to-use centralized interface, you can configure and set up backup and restore policies across multiple devices and platforms. Backups, recoveries, data migration, reports and tape media management can all be automated with NetVault Backup's job scheduling and device management features.

ABOUT QUEST

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple-to-use, and they deliver unmatched efficiency and productivity. Combined with Quest's invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
