Veeam Backup & Replication v10

Veeam Backup & Replication delivers powerful data protection across ALL your cloud, virtual, and physical workloads with a simple, flexible and reliable solution. Protect your data no matter the location or workload type. The fully featured, Portable VUL license is the best option with Enterprise Plus features and complete multi-cloud capability.

MOST POPULAR

Backup & Replication

Backup

Support for vSphere, Hyper-V and AHV hypervisors					Complete data protection with full spectrum recovery for the market-leading hypervisors. Protect VMs, data, applications and more with the ability to instantly recover complete VMs as well as perform granular recovery of key application items.
Application-aware, image-based backups					Create application-consistent, image-level VM backups with advanced, application-aware processing (transaction log backup for SQL only available in Enterprise and Enterprise <i>Plus</i> editions).

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
NAS Backup					Back up, protect and recover NAS file shares effectively and at scale, including SMB and NFS formats. Back up directly to Veeam repositories for short and long-term storage objectives. The first 250GB in each share is free with additional capacity licensed with VUL at 250GB per license. Long-term archival support for NAS data is not available with Community Edition.
AWS-native backup & recovery					Create AWS-native snapshots of Amazon Elastic Compute Cloud (Amazon EC2) instances, including backup to Amazon Simple Storage Service (Amazon S3) for long-term retention and compliance or backup copy job to on-premises storage. Recovery options include full- and file-level recovery in AWS, on-premises and Microsoft Azure, and Instant VM Recovery.
Veeam Capacity Tier					Leverage native object storage integration with on-premises, AWS, Microsoft Azure, IBM Cloud and multiple S3 compatible storage offers. This helps eliminate "public cloud tax" and vendor lock-in associated with secondary storage appliances. Veeam offers both copy and move capabilities for improving and automating redundant air-gapped storage options for long-term retention on object storage. Also, protect against ransomware with S3 object lock immutability for locking object storage repositories.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
ROBO Guest Interaction Proxy					Reduce the load on the central backup server and simplify scalability for enterprise-level businesses with a large number of remote office/branch offices (ROBOs) when performing application-aware processing and guest file system indexing.
Backup I/O control					Allows you to set the maximum acceptable I/O latency level for production datastores to ensure that backup and replication activities do not impact storage Availability to production workloads. Enterprise edition includes a global latency setting and Enterprise <i>Plus</i> edition provides setting customization on a per-datastore basis.
Backup from Storage Snapshots					Create image-based backups and replicas as often as necessary with little to no impact on production from the world's leading storage providers for backups from primary and secondary storage snapshots. This includes a growing list of storage alliance and ecosystem partners. (Backup from Secondary Storage Snapshots requires storage vendor specific snapshot replication enabled and configured)

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Primary Snapshot Orchestration					To support customers in implementation of better RTO and RPO windows, additional storage snapshots, including the option for transaction log processing, can be created on the primary storage arrays for a wide range of storage systems. Orchestration for secondary storage snapshots is included for several storage vendors in the Enterprise edition and above. (Secondary Storage snapshot orchestration requires storage vendor specific snapshot replication enabled and configured)
Storing backups					
Backup Copy jobs					Copy all or selected backups to your DR storage location of choice automatically, including validation and remediation to ensure copies are available and reliable. now Process log backups for SQL and Oracle. Additionally, Enterprise Application Plug-in backups like SAP HANA and Oracle RMAN are now processed. Veeam also added the option to use storage-based replication with HPE Catalyst copy for specific workloads.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
End-to-end encryption					Secure backup data and network transfers with end-to-end AES 256-bit encryption without any negative impact on built-in compression and WAN acceleration data reduction ratios. All editions include at-source (during backup), in-flight (network traffic) and at-rest (tape) encryption. Enterprise and Enterprise <i>Plus</i> editions also include lost password protection.
Native tape support					Back up files to any LTO compatible tape devices. All editions support file to tape jobs. Enterprise and Enterprise <i>Plus</i> editions add tighter integration with primary backup jobs, dedicated media pool type to simplify GFS retention and global media pools to simplify the usage of multiple tape devices. Enterprise <i>Plus</i> also provides NDMP to tape support for NAS devices.
Veeam Cloud Connect Backup					Get your backups off site with fully integrated, fast and secure backup, and restore from the cloud through a service provider of your choice.
Proxy affinity					Simplify job creation and map direct connections between proxies and backup repositories.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Per-VM backup files					Store each VM in a separate backup file to enhance backup performance when backing up to deduplicating storage. This is accomplished by leveraging parallel VM processing to enable multiple, concurrent write streams.
Deduplicating storage appliance integration					Get faster backup performance by backing up to deduplicating storage integrations (Dell EMC Data Domain Boost, HPE StoreOnce Catalyst and ExaGrid Accelerated Data Mover).
Scale-out Backup Repository™					Provide an abstraction layer over individual storage devices to create a single virtual pool of backup storage for your backups. With Enterprise edition, users can create two Scale-out Backup Repositories with three active extents and one inactive extent (placed in maintenance mode). Enterprise Plus edition has no limitations on the number of repositories or extents. In v10, users can take advantage of sealed mode to seal extents for protection and security or to gracefully phase out storage devices on your schedule.
Built-in WAN Acceleration					Get replicas and backup copy jobs off site up to 50x faster and save bandwidth. Enterprise edition supports built-in WAN Acceleration to Veeam Cloud Connect targets only, including support for up to 1 Gbps. Enterprise Plus edition supports built-in WAN Acceleration to any target.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Veeam Plug-in for Oracle RMAN & SAP HANA				✓	Stream SAP HANA and Oracle RMAN backups into Veeam repositories and recover with ease, leveraging native SAP and Oracle backup and restore capabilities, including simultaneous backup copies to multiple backup targets for Oracle Database Enterprise Edition. Oracle RMAN plug-in includes support for Oracle RAC, physical ASM, Oracle container DBs and Solaris. Recover with Veeam Explorer™ for Oracle when native restore is not an option. Now includes backup copy processing, increased performance and parallel backup processing for cluster.
Replication					
Image-based VM replication	✓	✓	✓	✓	Replicate VMs on site for High Availability or off site for DR.
Assisted failover and failback	✓	✓	✓	✓	Replica rollback and assisted failover and failback.
Replication from a backup	✓	✓	✓	✓	Create replicas directly from VM backup files without impacting production.
Planned failover	✓	✓	✓	✓	Facilitate data-center migrations with zero data loss.
Veeam Cloud Connect Replication		✓	✓	✓	Ensure Availability of your mission-critical applications with fully integrated, fast and secure cloud-based DR through a Disaster Recovery as a Service (DRaaS) provider of your choice.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
1-Click failover orchestration					Built-in failover plan orchestration enabling easy, 1-click-site failover to minimize unplanned downtime.
Recovery					
Entire VM Recovery					
Instant VM Recovery®					Accelerate disaster recovery and lower RTOs with mass instant restores powered by Veeam's next-generation Instant Recovery engine. You can immediately start a VM from a backup file stored on the backup repository. While increasing agility to allow instant recovery of ANY Veeam backup to VMware vSphere.
VM file and virtual disk recovery					Recover individual VM files (such as VMX) and virtual disks.
File level Recovery					
Instant File-Level Recovery					Recover files from 19 common file systems used by Windows, Linux, BSD, Mac OS, Novell, Solaris and Unix. ²
Item level Recovery					
Veeam Explorer™ for Storage Snapshots ¹					Restore individual VMs, guest files and application items from storage snapshots. This also includes transaction log processing in snapshot jobs for point-in-time restore from snapshots for Oracle and SQL.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Veeam Explorer for Microsoft Active Directory					Search and restore for all Active Directory (AD) object types, such as users, groups, computer accounts and contacts, including user and computer password recovery. All editions, including <i>Community Edition</i> , support single user and computer account restore via export in LDIFDE format or restore back to AD, plus the ability to restore passwords. Enterprise and Enterprise <i>Plus</i> editions include multi-select restore and container restore, Group Policy Objects (GPO) restore, AD-integrated DNS records restore and configuration partition objects restore.
Veeam Explorer for Microsoft Exchange					Get instant visibility into Microsoft Exchange backups for item recovery of individual Exchange items (emails, appointments, notes, contacts, etc.), online archive mailboxes and hard-deleted items. Leverage comprehensive e-Discovery functionality, including query-result, size estimation and detailed export reports. All editions, including <i>Community Edition</i> , support Exchange mailbox item restore via save, send and PST export. Enterprise and Enterprise <i>Plus</i> editions support restoring back to the original mailbox.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Veeam Explorer for Microsoft SQL Server					Restore individual SQL databases with ease, without needing an extensive SQL background or having to search for database and transaction-log files. All editions, including Community Edition, support local, point-in-time SQL database restores. Enterprise and Enterprise <i>Plus</i> editions include agentless, transaction-log backup and replay, transaction-level recovery of databases and SQL objects (tables, stored procedures, views, etc.) back to the original or new SQL server.
Veeam Explorer for Microsoft SharePoint					Get instant visibility into SharePoint backups with advanced search-and-browse capabilities for quick recovery of individual SharePoint items and entire sites. All editions, including Community Edition, support SharePoint item restore via save, send and export. Enterprise and Enterprise <i>Plus</i> editions also support entire-site restore, as well as restore to the original location.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Veeam Explorer for Oracle					Restore individual Oracle databases with ease without needing an extensive Oracle background or having to search for database and transaction-log files. Enterprise and Enterprise Plus editions include agentless, transaction-log backup, archived log management and transaction-level recovery of databases back to the original or new Oracle Server, as well as the ability to publish and export Oracle databases. Enterprise Plus edition allows Oracle database administrators to leverage the Oracle Recovery Manager (RMAN) for backup and restore, while Veeam Explorer for Oracle allows non-database administrators a simple user interface for database restores in emergency situations from those RMAN backups.
Self-Service					
1-Click File and VM recovery portal for help desk operators					Restore guest files and VMs with a single click through a web UI.
Microsoft Exchange item recovery portal for help desk operators					Restore missing mailbox items back to the original mailbox with a single click through a web UI.
Database recovery portal for Microsoft SQL DBs					Restore individual databases back to the original server or a new SQL server with a single click through a web UI.
Database recovery portal for Oracle DBs					Restore Oracle databases to the original server or a new Oracle server with single click through a web UI.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Self-service file restore portal				✔	File-restore portal with automatic VM detection and automatic delegation based on Local Administrator group membership.
Recovery delegation				✔	Enable full self-service for all web UI recovery features by delegating recoveries for individual VMs and groups of VMs to specific users or groups such as local IT staff, application owners, department members, etc.
Veeam DataLabs					
Secure Restore	✔	✔	✔	✔	Scan and verify backups to increase security and reduce interruptions caused by viruses through real-time, optional antivirus scans; recover back to a safe, uncompromised restore point; agnostic support for Windows Defender, ESET and Symantec Protection Engine, as well as the ability to extend to other third-party antivirus tools.
SureBackup®			✔	✔	Automatically test and verify every backed-up VM for recoverability by running the VM directly from the backup file (no full VM restore is required), including support for custom application test scripts.
SureReplica ²			✔	✔	Automatically test and verify every replica VM for recoverability, including support for custom application test scripts.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Staged Restore					Streamline the removal process of sensitive data such as GDPR (right to be forgotten), with custom scripts and automation; test data in a fenced-off, production-like environment before safely and quickly restoring to production.
On-Demand Sandbox™					Run one or more VMs directly from a backup in an isolated environment and have the ability to troubleshoot, test and train on a working copy of the production environment, without impacting business operations.
On-Demand Sandbox for Storage Snapshots ²					Use storage snapshots to quickly create complete isolated copies of your production environment for fast and easy testing and troubleshooting.
Management					
Support for VMware vSphere and Microsoft Hyper-V					Support for VMware vSphere 5.x or later and Microsoft Hyper-V 2008 R2 SP1 or later. View both hypervisors from a single console.
Built-in management for Veeam Agents					The ability to organize, automate, and deploy Windows and Linux agent backups with Veeam Agent protection groups. Create groups based on Active Directory or CSV files and configure custom automatic update and deployment schedules.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Guest file system indexing					A catalog of guest files enabling effortless search of individual files to find and restore a file without knowing the precise file location, or the time when it was deleted. All editions provide a catalog of guest files in backups currently on disk. Enterprise and Enterprise <i>Plus</i> editions also provide a catalog of archived backup files, and integrate with one click to enable restores directly from search results.
vCloud Director support ²					Back up vApp and VM metadata and attributes and restore vApps and VMs directly to vCloud with full support for fast provisioned VMs. All editions include integrated visibility of vCloud Director infrastructure, backup via VeeamZIP (including backup of vApp and VM meta data and attributes) and direct restore to vCloud. Enterprise edition supports scheduled incremental backup jobs of vCloud VMs, as well as customer portal integration via RESTful API. Enterprise <i>Plus</i> supports self-service, tenant managed backup and restore via Enterprise Manager, as well as native vCloud Director authentication.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Veeam Backup Enterprise Manager – Centralized Management Web UI					Get a web-based, consolidated view of your distributed deployment in a single pane of glass, without having to login to individual backup servers, including federation of multiple backup servers, centralized reporting and consolidated alerting. Paid editions include monitoring and reporting across multiple backup servers, as well as the ability to start and stop jobs. Enterprise and Enterprise <i>Plus</i> editions also include full job management functionality and the ability to perform restores.
Role-Based Access Control (RBAC) ²					Delegate roles and privileges to users to create, restore and monitor backups; synch permissions made in third-party delegation systems to VMware vSphere permissions; leverage individual accounts or security groups to control backup storage location and quotas; allow users to securely manage backups and restores of their own VMs through the self-service backup and restore portal for VMware vSphere with role-based access delegation rules.

VEEAM BACKUP & REPLICATION	COMMUNITY*	STANDARD	ENTERPRISE	ENTERPRISE PLUS	Notes
Other capabilities					
Task automation					All editions support PowerShell. Enterprise <i>Plus</i> edition also supports RESTful API. Service Providers using rental licenses have API access across all editions.

¹ Some file systems supported for VMware only

² VMware only

* Community Edition is limited to 10 licenses or less

Veeam ONE V10

Veeam ONE, part of Veeam Availability Suite, provides a comprehensive monitoring and analytics solution for backup, virtual and physical environments. With support for Veeam Backup & Replication and Veeam Agents, as well as VMware vSphere, Microsoft Hyper-V and Nutanix AHV, Veeam ONE delivers deep, intelligent monitoring, reporting, and automation through interactive tools and intelligent learning, identifying and resolving real customer problems before they begin.

Monitoring & reporting			
Monitoring and alerting for Veeam Backup & Replication			
Performance monitoring and alerting for backup activity			Performance monitoring and alerting for backup activity displays Veeam Backup & Replication™ jobs, including their latest state and performance statistics. Veeam ONE has no limitations on the number of Veeam Backup & Replication servers that can be monitored. <i>Community Edition</i> is limited to one server.
Email notification and alarms			You can receive notification of alarms via customizable email. Email customizations are not available in <i>Community Edition</i> , and emails will not include all alarm details, such as time and affected object.
Veeam backup general reporting			Veeam ONE features a number of reports including overviews of Veeam Backup & Replication configurations, backup infrastructure audits, compliance reporting, protected VMs, capacity planning, tape reports, and more. (Community edition is limited to only 10 workloads)
NAS Backup monitoring and reporting			You can monitor NAS backups to track file storage protection, backup data amount and performance, number of file shares on a backup repository and tapes, real-time backup job status and historical job stats. Also included are alarms based on the state of backup jobs, as well as backup proxy connection state and performance.
AWS-native backup and recovery monitoring			Support for AWS-native backup and recovery includes job sessions, job state alarms and protected VM report (including unprotected VMs).
Data protection monitoring and reporting for Nutanix AHV			Monitoring and reporting for Nutanix AHV VM protection, including backup job state and performance statistics

Veeam ONE	Community	Licensed Editions	Notes
Agent monitoring and reporting			Support for Veeam backup agents includes a number of alarms and reports to help users analyze trends and determine how policies and backup jobs have evolved, determine the backup status of agents including which agents have no backup copies and how many are protected/unprotected, as well as the backup state with the total number of successes, warnings and failures.
Veeam Cloud Connect Reporting			Reports include information about the Veeam Cloud Connect infrastructure – user quota usage, capacity planning for cloud repositories and configuration data for cloud gateways and repositories.
Performance monitoring and alerting for Veeam Cloud Connect			Performance monitoring and alerting for Veeam Cloud Connect displays jobs for Veeam Cloud Connect backup servers only, including their latest state and performance statistics. Note: To monitor and report on managed clients, Veeam ONE™ needs to be deployed at the tenant's site. <i>Community Edition</i> is limited to one week of performance.
Heatmaps			Heatmaps help plan resource usage and easily optimize backup activities with real-time visibility into backup repositories and proxies. <i>Community Edition</i> is limited to three proxy servers and three repositories.
Monitoring and alerting for virtual infrastructure			
Performance monitoring and alerting for virtual infrastructures			Display virtual infrastructure hosts, datastores and statistics. In <i>Community Edition</i> , performance graphs only show one week of performance and emails include limited alarm details.
Application-level Monitoring and Management			Ensure availability of mission-critical apps, monitor select groups of applications, create additional alarms to monitor VM service states, ensure processes aren't exceeding available resources, identify if critical applications have been disabled, such as anti-virus software, or indicate if unwanted changes have taken place. With <i>Community Edition</i> , you can monitor an unlimited number of applications on up to three VMs.
VMware vSphere and Microsoft Hyper-V Reporting			Individual report packs for vSphere and Hyper-V provide general configuration overviews for vCenter Servers, datastores, clusters hosts and VMs, as well as SCVMMs, volumes, clusters, hosts and VMs, including information on the most common alarms raised for virtual infrastructure objects. Optimization report packs also allow users to evaluate the efficiency of resource usage and to optimize VM resource provisioning to help achieve improved output and increased ROI for virtualized environments. With <i>Community Edition</i> , optimization reports are limited to show only three VMs and historical performance reports are limited to the last 24 hours of data.
Multi-tenant reporting and monitoring			Delegate reporting to system administrators over a limited scope of assigned VMs (VMware vSphere only).

Veeam ONE	Community	Licensed Editions	Notes
Infrastructure Assessment			
Infrastructure Assessment – Veeam Backup & Replication			Assessment reporting designed to verify your Veeam Backup & Replication installation meets all known best practices.
Virtual Infrastructure Assessment (vSphere and Hyper-V)			Assessment reporting designed to verify your VMware vSphere and/or Microsoft Hyper-V infrastructure meets all known best practices.
Report Customization and Automation			
Raw data analysis			Create custom Microsoft Excel reports using templates you define.
Customizable, pre-defined report templates			Customize and save pre-defined report templates to create reports that fit your specific information and formatting needs. <i>Community Edition</i> is limited to saving one customized report template.
Automated report generation and delivery			Schedule reports to be automatically generated and delivered to your inbox, dashboards, web portals or archives.
General			
Business View			From Veeam Monitor, categorize and group clusters, hosts, VMs and datastores by criteria such as business unit, department, purpose and SLA. Leverage VMware Tags to assist with Role-Based Access Control and eliminate human error, including tagging sensitive data by location to meet compliance. Easily monitor apps, regardless of geographic location, and categorize business view objects based on multiple parameters to gather insight on how infrastructure investments are being leveraged. You also can assign administrators to manage specific parameters.
Alarm customization and modeling			Ensure complete monitoring coverage by creating custom alarms for events unique to your virtual environment. Model alarms against past performance data to understand potential alarm frequency and avoid inadvertent alert storms and missed events.
Intelligent automation			
Veeam Intelligent Diagnostics			Proactive identification and alerting of known issues within your Veeam environment, providing self-support resolutions via hotfixes or reconfigurations. For <i>Community Edition</i> , all of the alarms will continue to work but the details for each alarm will not be shown.
Remediation Actions			Predefined and automated resolution of common backup and virtual infrastructure-related issues with self-healing Remediation Actions help to reduce IT management costs. With <i>Community Edition</i> , Remediation Actions are available, but require manual approval.

Veeam ONE	Community	Licensed Editions	Notes
Dashboards			
Predefined performance dashboards for backup and virtual infrastructures			Get at-a-glance views of backup jobs and the backup infrastructure, as well as viewing the VMs, hosts and clusters that are the highest consumers of CPU, memory, network and datastore resources. Also, view datastore utilization metrics, including metrics relating to VM snapshots and guest disk space usage.
Customized reporting dashboards			Create your own at-a-glance views of your virtual environment. Community Edition allows for one customized reporting dashboard to be created.
Capacity planning			
Capacity planning – VMware vSphere and Microsoft Hyper-V			Individual report packs (for VMware vSphere and Microsoft Hyper-V) are designed to forecast when the available virtual infrastructure resources will reach their minimum levels. The packs provide recommendations on resource allocation and load balancing to optimize performance and resource utilization in your respective virtual environment and to avoid possible performance bottlenecks.
Deployment project reports			Leverage fully automated "what-if" modeling scenarios to safely add or remove VMs or hosts from your infrastructure and to accurately calculate the required resources needed for each project.
Chargeback and billing			
Chargeback Analysis Reports			Chargeback reports help you understand the costs associated with individual virtual infrastructure users, as well as help you perform chargeback by analyzing VM configuration and resource usage, including CPU, memory and storage. Four reports are included: Host Configuration Chargeback, Host Resource Usage Chargeback, VM Configuration Chargeback and VM Performance Chargeback.
Veeam Backup – Billing			This report provides chargeback capabilities for Veeam Backup & Replication and helps assess storage management costs for backup and replication operations, providing data that can be used in financial and billing reports.
 Fully supported  Partially supported
